## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11 and 25-37, are drawn to “fuse structure” and to “method of blowing a fuse”, classified in class 337.
  - II. Claims 12-16, are drawn to “a bus”, classified in class 361, subclass 626.
  - III. Claim 17-24, are drawn to “a circuit”, classified in class 361, subclass 104.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions III and I or II, are related as combination (III) and subcombinations (I or II). Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed (a circuit) does not require the particulars of the subcombinations as claimed, at least in part, because: claims 17-24 directed to “a circuit” do not recite, for example “a first region”, “a second region” and “a point of localized heating” as required for subcombination I (fuse structure) and that “first segments have a length sufficient for thermally insulating said second segment from said circuit elements” as required for subcombination II (a bus). The subcombination I has separate utility such as a fuse and may be

Art Unit: 2835

employed in different types of circuits and devices, and subcombination II has a separate utility as a bus and may be employed with different types of fuses and in different types of circuits.

3. Inventions I (fuse structure) and II (bus) are related as subcombinations disclosed as usable together in a single combination (circuit). The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a fuse which may be employed in different types of circuits or devices, and invention II has a separate utility as a bus which may be used with different types of fuses in and in different types of circuits (see paragraph 2). See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2835

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
